Air Conditioning and Refrigeration System Evaluation Guide ...

The red dots inside the piping represent discharge vapor. The solid red color represents high pressure liquid refrigerant. Most air cooled refrigeration systems are designed so that the refrigerant will condense at a temperature about 25 to 30 degrees above the ambient air temperature around the condenser. Most water cooled systems are designed for 75° to 95° entering condenser water temperature, with 85° being the design temperature.

The refrigeration cycle explained in plain english.

The most common type of central air conditioning is the split system, which features a large, boxy condenser outside the home and a fan-and-coil system inside, connected by pipes carrying...
