Reissued with a new preface by the author on the fiftieth anniversary of the Apollo 11 journey to the moon The years that have passed since Neil Armstrong, Buzz Aldrin, and Michael Collins piloted the Apollo 11 spacecraft to the moon in July 1969 have done nothing to alter the fundamental wonder of the event: man reaching the moon remains one of the great events—technical and spiritual—of our lifetime. In *Carrying the Fire*, Collins conveys, in a very personal way, the drama, beauty, and humor of that adventure. He also traces his development from his first flight experiences in the air force, through his days as a test pilot, to his Apollo 11 space walk, presenting an evocative picture of the joys of flight as well as a new

perspective on time, light, and movement from someone who has seen the fragile earth from the other side of the moon.

The commander of Apollo 11 offers an insider's view of the NASA space program, recalling training programs and design testing and sharing his memories of such remarkable individuals as Neil Armstrong, John Glen, Frank Borman, and Buzz Aldrin.

In July 1969, Neil Armstrong, Buzz Aldrin and Michael Collins piloted the Apollo 11 spacecraft to the moon. Fifty years later, it is still one of the greatest achievements in human history. In this remarkable memoir, a defining classic, Michael Collins conveys, in a very personal way, the drama, beauty, and humour of that adventure. He also traces his development from his first flight experiences in the air force, through his days as a test pilot, to his involvement in Project Gemini and his first spaceflight on Gemini 10. He presents an evocative picture of the famous Apollo 11 spacewalk, detailing the joys of flight and a new perspective on time, light, and movement from someone who has seen the fragile Earth from the other side of the moon. Celebrating the 50th anniversary of the moon-landing, *Carrying the Fire* by Michael Collins is the utterly absorbing and truly compelling classic account of what it was like to be a member of the Apollo 11 mission to the moon.

In this entrancing account, space traveler Michael Collins recalls his early days as an Air Force test pilot, his astronaut training at NASA, and his unparalleled experiences in orbit, including the Apollo 11 mission, the first manned lunar landing. The final chapter to his autobiography,

revised and updated for this edition of Flying to the Moon, is an exciting and convincing argument in favor of mankind's continued exploration of our universe. "Several astronauts have written about their experiences, but none so well as Michael Collins...This is just the book to give the child whose parents made Yeager and The Right Stuff best sellers."-The Washington Post Book World

The author, an astronaut, discusses his early career, his training for space flight, his trips into space including the first lunar landing, and the possibilities for life and flight in space in the future.

An authorized portrait of the first astronaut to set foot on the moon sheds light on other aspects of his career, from the honors he received as a naval aviator to the price he and his family paid for his professional dedication.

"Pop-Up bok for kids about the historic Apollo 11 landing, on its 50th anniversary."--

Growing up on either side of the Iron Curtain, David Scott and Alexei Leonov experienced very different childhoods but shared the same dream to fly. Excelling in every area of mental and physical agility, Scott and Leonov became elite fighter pilots and were chosen by their countries' burgeoning space programs to take part in the greatest technological race ever-to

land a man on the moon. In this unique dual autobiography, astronaut Scott and cosmonaut Leonov recount their exceptional lives and careers spent on the cutting edge of science and space exploration. With each mission fraught with perilous risks, and each space program touched by tragedy, these parallel tales of adventure and heroism read like a modern-day thriller. Cutting fast between their differing recollections, this book reveals, in a very personal way, the drama of one of the most ambitious contests ever embarked on by man, set against the conflict that once held the world in suspense: the clash between Russian communism and Western democracy. Before training to be the USSR's first man on the moon, Leonov became the first man to walk in space. It was a feat that won him a place in history but almost cost him his life. A year later, in 1966, Gemini 8, with David Scott and Neil Armstrong aboard, tumbled out of control across space. Surviving against dramatic odds—a split-second decision by pilot Armstrong saved their lives—they both went on to fly their own lunar missions: Armstrong to command Apollo 11 and become the first man to walk on the moon, and Scott to perform an EVA during the Apollo 9 mission and command the most complex expedition in the history of exploration, Apollo 15. Spending three days on the moon, Scott became the seventh man to walk on its breathtaking surface. Marking a new age of USA/USSR cooperation, the Apollo-Soyuz Test Project brought Scott and Leonov together, finally ending the Cold War silence and building a friendship that would last for decades. Their courage, passion for exploration, and determination to push themselves to the limit emerge in these memoirs not only through their triumphs but also through their perseverance in times of extraordinary difficulty and danger.

The basis of the 2014 award-winning feature-length documentary! A revealing and dramatic

look at the inside of the American Space Program from one of its pioneers. Eugene Cernan was a unique American who came of age as an astronaut during the most exciting and dangerous decade of spaceflight. His career spanned the entire Gemini and Apollo programs, from being the first person to spacewalk all the way around our world to the moment when he left man's last footprint on the Moon as commander of Apollo 17. Between those two historic events lay more adventures than an ordinary person could imagine as Cernan repeatedly put his life, his family and everything he held dear on the altar of an obsessive desire. Written with New York Times bestselling author Don Davis, *The Last Man on the Moon* is the astronaut story never before told - about the fear, love and sacrifice demanded of the few men who dared to reach beyond the heavens for the biggest prize of all - the Moon.
