"The Witches' Almanac" has long featured black and white images of beautiful woodcuts, fantastical creatures, tarot cards, astrological features and constellations, as well as line drawing selected from the folklore of our global community. "The Witches' Almanac Coloring Book" brings together a larger format of these images presented in past Almanacs (in addition to images that have not been presented) allowing the inner artist to emerge in a mediation of color. Neatly packed into seven distinct sections, the first fittingly is Woodcuts. When they first appeared in Europe, woodcuts had thick outlines and little shading. A printer inked the block and applied light pressure to transfer the lines to paper. After the ink dried, another craftsman might color the images by hand. In other words, the process was very much like a coloring book today, except that today you are the colorist. The six remaining sections are Constellations, The Planets, Creatures, Egyptian, Americas and Tarot. Each provides for the artist the space to meditate on the imagery imbuing each with color. The aspiring Tarot reader should especially enjoy the final section where each of the 22 Major Arcana and the four Aces are provided.

One of the most important subjects for any student of engineering or materials to master is the behaviour of materials and structures under load. The way in which they react to applied forces, the deflections resulting and the stresses and strains set up in the bodies concerned are all vital considerations when designing a mechanical component such that it will not fail under predicted load during its service lifetime. Building upon the fundamentals established in the introductory volume Mechanics of Materials 1, this book extends the scope of material covered into more complex areas such as unsymmetrical bending, loading and deflection of struts, rings, discs, cylinders plates, diaphragms and thin walled sections. There is a new treatment of the Finite Element Method of analysis, and more advanced topics such as contact and residual stresses, stress concentrations, fatigue, creep and fracture are also covered. Each chapter contains a summary of the essential formulae which are developed in the chapter, and a large number of worked examples which progress in level of difficulty as the principles are enlarged upon. In addition, each chapter concludes with an extensive selection of problems for solution by the student, mostly examination questions from professional and academic bodies, which are graded according to difficulty and furnished with answers at the end.
