Native forest silviculture Native forests are
naturally occurring treed areas that are
managed for sustainable timber production. In
NSW, native State forests have been harvested
and regenerated many times over the past 100
years or more and careful planning and
management ensures they will continue to
produce a sustainable supply of timber well
into the future.

Forestry Corporation - Silviculture

The tenth edition of the classic work, *The
Practice of Silviculture: Applied Forest
Ecology*, includes the most current
information and the results of research on
the many issues that are relevant to forests
and forestry. The text covers such timely
topics as biofuels and intensive timber
production, ecosystem and landscape scale
management of public lands, ecosystem
services, surface drinking water supplies,
urban and community greenspace, forest

Silviculture: Concepts and Applications reflects a belief that all the tools of silviculture have a useful role in modern forestry. Through careful analysis and creative planning, foresters can address a wide array of commodity and nonmarket interests and opportunities while maintaining dynamic and resilient forests. A landowner's needs, circumstances, and site conditions guide a silviculturist's judgment and decision making in finding the best ways to integrate the biologic-ecologic, economic-financial, and managerial-administrative requirements at hand. The Third Edition of this influential text provides a foundational basis for rigorous discussion of techniques. The inclusion of numerous real-world examples and balanced coverage of past and current practices broadens the concept of silviculture and the ways that managers can use it to address both traditional and emerging interests in forests. A thorough discussion of new and proven interpretations increasingly directs the attention of foresters toward the role silviculture plays in creating, maintaining, rehabilitating, and

Download File PDF General Forestry History Silviculture Regeneration And restoring forests that can sustain an expanding variety of ecosystem services.

Describes the history and formation of Russian forest policy, legislation, and management from the 8th century to the present time. The beginning of forest science in Russia is described. Advances in soil science, forest ecology, valuation, organization, and management, and the theory of forest use over historical time are discussed. Contributions of influential Russian leaders are described by field and time period. Russian forests comprise 22% of the world's total forests and over half of the world's coniferous forest area and world coniferous growing stock. Illustrated with historical photographs.
