This title seeks to understand what a successful country like South Korea does after it has attained 'development' and economic maturity. It looks at Korea and Asian regionalism; Korean business and innovation strategies in Asia; and Asian migration and immigrants in Korea.

This is a critical comparative analysis of the origin, nature, problems and prospects of steel development and industrialisation in Nigeria and South Korea. Focusing on the steel sector, this ground-breaking book examines the interplay among the state, local capital, transnational corporations, the World Bank and IMF. The book examines how all these factors have come to shape the content and direction of steel development in these two countries.

The POSCO Strategy brings to life one of the world's great industrial success stories. Expertly told by William T. Hogan, an accomplished commentator on the global steel industry, the work traces the meteoric rise of South Korea's Pohang Iron and Steel Company and the incredible impact it has had on this small agrarian country. In a mere quarter of a century POSCO has grown to become the largest steel company in the world and has dragged South Korea into the industrial age. The book not only provides a blueprint for the world's steel industry but offers an incredible case study to students of modern Asian economic history seeking to understand how a non-industrialized economy can be so dramatically modernized by the development of a single industry.

This book, first published in 1988, considers the problems that developing countries face when importing technology from abroad. The major issues - technical, economic, political - are analysed in the case of one particular country: Korea. The book describes the negotiations with the foreign companies that controlled the desired technology, the building of the plants, the training of engineers and managers to replace expatriots, the improvements of processes and products and the maintenance of efficient and profitable production. In their research the authors were given access to information usually kept confidential - government memoranda and minutes, company contacts and records, costs and prices. The book also considers how typical of the developing countries Korea is, and the authors make certain policy recommendations for the future.
