The identification and quantification of the properties and components of water samples are under the domain of water chemistry. The type and sensitivity of tests performed depends on desirability and intended use of water. It integrates studies in water quality, hydrology, pollution and geothermal waters. Methods of mass spectrometry and gas chromatography, specialized organoleptic methods, etc. are routinely used in water chemistry. Such studies are crucial in the domains of forensic analysis, research, drinking water supply, etc. This textbook is a valuable compilation of topics, ranging from the basic to the most complex theories and principles in the field of water chemistry. Most of the topics introduced herein cover

Though overall cancer incidence and mortality have continued to decline in recent years, cancer continues to devastate the lives of far too many Americans. In 2009 alone, 1.5 million American men, women, and children were diagnosed with cancer, and 562,000 died from the disease. There is a growing body of evidence linking environmental exposures to cancer. The Pres. Cancer Panel dedicated its 2008;2009 activities to examining the impact of environmental factors on cancer risk. The Panel considered industrial, occupational, and agricultural exposures as well as exposures related to medical practice, military activities, modern lifestyles, and natural sources. This report
