This media history explores a series of portable small cameras, playback devices, and storage units that have made the production of film and video available to everyone. Covering several storage formats from 8mm films of the 1900s, through the analogue videotapes of the 1970s, to the compression algorithms of the 2000s, this work examines the effects that the shrinkage of complex machines, media formats, and processing operations has had on the dissemination of moving images. Using an archaeological approach to technical standards of media, the author provides a genealogy of portable storage formats for film, analog video, and digitally encoded video. This book is a step forward in decoding the storage media formats, which up to now have been the domain of highly specialised technicians.

The modern histories of China and Japan are inexorably intertwined. Their relationship is perhaps most obvious in the fields of political, economic, and military history, but it is no less true in cultural and art history. Yet the traffic in artistic practices and practitioners between China and Japan remains an understudied field. In this volume, an international group of scholars investigates Japan 's impact on Chinese art from the mid-nineteenth century through the 1930s. Individual essays address a range of perspectives, including the work of individual Chinese and Japanese painters, calligraphers, and sculptors, as well as artistic associations, international exhibitions, the colotype production or artwork, and the emergence of a modern canon.
