A comprehensive review of bariatric and metabolic surgery for the general surgery! Topics include: The obesity epidemic/economic impact and diabetes epidemic/economic impact, physiology of obesity/diabetes, physiology of weight loss surgery, history of bariatric surgery, laparoscopic adjustable gastric banding, sleeve gastrectomy, biliopancreatic diversion/duodenal switch, laparoscopic gastric bypass, complications of laparoscopic adjustable gastric binding, complications of laparoscopic gastric bypass, outcomes/comparative effectiveness studies, co-morbidity reduction data, economic impact of bariatric surgery, adolescent bariatric surgery, revisional bariatric surgery, the future of bariatric surgery, and more!

Editor George Velmahos and authors highlight every important area in Acute Care Surgery for all general surgeons. Topics include obstruction, perforation, bleeding, acute inflammation, hernia emergencies, the open abdomen, necrotizing soft tissue infections, vascular emergencies, thoracic emergencies, and much more!

Essential Surgery is part of a nine volume series for Disease Control Priorities which focuses on health interventions intended to reduce morbidity and mortality. The Essential Surgery volume focuses on four key aspects including global financial responsibility, emergency procedures, essential services organization and cost analysis.

All around us, in this age of consumerism, are expressions of public expectations regarding the quality of medical care. Among the responses of the medical profession to this growing public demand has been a cre scendo of interest in continuing education. Continuing education is not a new concern for the physician. Most major professional organizations were founded to increase the exchange of information among members. But something new is in the wind. Both inside and outside the profes sion, the question is becoming more and more insistent: What does at tendance at meetings or exposure to other types of prepared materials have to do with the quality of care that is provided? Recertification, reexamination, and peer review of outcomes of practice-subjects only recently unmentionable-have become common issues before specialty boards, legislatures, hospital boards, insurance carriers, and even medical societies. As of October of 1979, all 22 of the member boards of the American Board of Medical Specialties had made commitments to the principle of periodic recertification of their members. Most boards have explicitly acknowledged that the cognitive skills measured in the objective examination do not assure clinical competence. An assumption behind information-assessing recertification efforts is that, though mastery of the current knowledge upon which clinical decisions should be made does not guarantee competent practice, the lack of it probably impairs competent practice.

Problems in Breast Surgery: A Repair Manual is destined to become a valued part of every plastic surgeon and breast surgeon's library. This unique book provides a virtual lifeline for addressing the challenges encountered in aesthetic and reconstructive breast surgery and avoiding possible problems and complications. This is not a traditional technique-oriented textbook; rather, it has a problem focus and provides different solutions for solving complex problems associated with secondary breast surgery. The book begins with chapters on the basic principles of corrective breast surgery and the key anatomic factors and mechanisms of failure that are key to accurate analysis. With this foundation in place, it proceeds to address the spectrum of potential problems that can occur with each of the different procedures, ranging from breast augmentation, reduction, and mastopexy to breast and nipple-areola reconstruction. Each chapter is introduced with a specific problem presented by Drs. Fisher and Handel. Then the second portion of the chapter features a variety of solutions from different experts for treating the problem. These experts provide case examples of similar problems with a step-by-step explanation of how they solved these problems and why they took the approach that they used. The book covers both aesthetic and reconstructive breast surgery. The goal of this text is not to judge which solution is the best (that decision is left to the reader). Rather, it is designed to provide a detailed road map explaining how to move from point A, the problem, to point B, the solution. Beautifully Illustrated Dramatic color illustrations and numerous preoperative, intraoperative, and postoperative images help readers visualize the steps of each operative solution. Unique Features This book's approach is unique and should be of great educational value to surgeons—both residents and practitioners—in solving challenging problems and complications. Even more important, it will help them avoid problems and complications in future cases.

With breast augmentation and tumor removal the #1 procedures in cosmetic surgery and reconstructive surgery, respectively, according to latest ASPS information, this issue on breast augmentation presents discussion of procedures for cosmetic enhancement and for breast reconstruction. The first section includes topics such as: Evolution and Future Development of Breast Implants; Standardization of the Bra Cup; Process of Breast Augmentation with Special Focus on Patient Education, Patient Selection and Implant Selection; Etiology & Prevention of Capsular Contracture; 3-D Imaging and Simulation in Breast Augmentation: What is the Current State of the Art?; Fresh Look at the Anatomy of the Chest Wall with Special Attention to the Pectoralis Major and Infra-Mammary Fold with Implications to Breast Surgery; Differences between Saline & Silicone Implants that Most Plastic Surgeons Don't Know; Shapes, Sizes, Shells and Surface and the Selection Process of Breast Implants; Shapes, Proportions and Variations in Breast Aesthetic Ideals - definition of breast beauty: analysis and surgical practice. The next section presents surgical approaches and techniques for breast implant surgery: Teaching Breast Augmentation What are the Critical Intra Operative Steps & Decision Making: Maximizing Results and Minimizing Revisions; Mastering the Nuances of Highly Cohesive Shaped Breast Implants; Strategies, Challenges and Solutions in Augmentation Mastopexy Patients: The Most Difficult Primary Breast Procedure; Use of Scaffold Support of the Breast in Primary Augmentation Mastopexy; Considerations and Improvement of Breast Asymmetry in Primary Augmentation; Surgical Strategies in the Correction of the Tuberous Breast; Subfascial Approach to Breast Augmentation with Lipofilling of the Breast; Surgical Approaches to Breast Augmentation: Surgical Options for Incisions & Planes; Fat Grafting / Fat Transfer to the Breast; Use of Barbed Sutures in Primary Augmentation and Mastopexy. The final section presents special situations in surgical procedures: High Resolution Ultrasound and the Detection of Breast Implant Shell Failure; Breast Implant Associated ALCL.

New York Times bestseller Business Book of the Year--Association of Business Journalists From the New York Times bestselling author comes an eye-opening, urgent look at America's broken health care

system--and the people who are saving it--now with a new Afterword by the author. "A must-read for every American." --Steve Forbes, editor-in-chief, FORBES One in five Americans now has medical debt in collections and rising health care costs today threaten every small business in America. Dr. Makary, one of the nation's leading health care experts, travels across America and details why health care has become a bubble. Drawing from on-the-ground stories, his research, and his own experience, *The Price We Pay* paints a vivid picture of the business of medicine and its elusive money games in need of a serious shake-up. Dr. Makary shows how so much of health care spending goes to things that have nothing to do with health and what you can do about it. Dr. Makary challenges the medical establishment to remember medicine's noble heritage of caring for people when they are vulnerable. *The Price We Pay* offers a road map for everyday Americans and business leaders to get a better deal on their health care, and profiles the disruptors who are innovating medical care. The movement to restore medicine to its mission, Makary argues, is alive and well--a mission that can rebuild the public trust and save our country from the crushing cost of health care.

This issue of *Surgical Clinics of North America* focuses on Issues in Transplant Surgery, and is edited by Dr. Juan Palma-Vargas. Articles will include: Kidney transplantation: Patient selection, perioperative surgical issues and expected outcomes; Kidney paired donation; Management of abdominal surgical emergencies in transplant recipients: What a general surgeon should know; Post transplant malignancy; Liver transplantation: Patient selection, perioperative surgical issues and expected outcomes; Organ Preservation 101; Pediatric Abdominal Organ Transplantation; Pancreas Transplantation; Small Bowel Transplantation; Supply vs demand: Status of organ donation in the US, the wait list, and what can be done to close the gap; and more!

An important review on vascular surgery for the general surgeon! Topics include work up, optimal medical management, non-atherosclerotic arterial diseases, claudication, critical limb ischemia, aneurismal diseases, mesenteric ischemia, vascular trauma, venous diseases, thromboembolic diseases, dialysis access, carotid artery occlusive disease, and more!

The current medical literature contains ample text addressing the topics of trauma and critical care. However, there are few texts existing that specifically address the common surgical problems encountered by practicing acute care surgeons. *Common Problems in Acute Care Surgery* provides a comprehensive, evidence-based review of the most common clinical problems encountered by acute care surgeons. Focusing on the clinical care of the patient, this volume explores the general principles of acute care surgery and the specific disease states that are commonly encountered by acute care surgeons. The work also touches upon the ethical issues and systems development behind acute care surgery, including practical considerations for establishing an acute care surgery program, ethical considerations in acute care surgery, and the role of palliative care. Authored by respected experts in the field and illustrated throughout with detailed photographs, *Common Problems in Acute Care Surgery* is of great value to resident surgeons in training, fellows, and practicing surgeons in acute care surgery.
