As the global ' data revolution ' accelerates, how can the data rights and interests of indigenous peoples be secured? Premised on the United Nations Declaration on the Rights of Indigenous Peoples, this book argues that indigenous peoples have inherent and inalienable rights relating to the collection, ownership and application of data about them, and about their lifeways and territories. As the first book to focus on indigenous data sovereignty, it asks: what does data sovereignty mean for indigenous peoples, and how is it being used in their pursuit of self-determination? The varied group of mostly indigenous contributors theorise and conceptualise this fast-emerging field and present case studies that illustrate the challenges and opportunities involved. These range from indigenous communities grappling with issues of identity, governance and development, to national governments and NGOs seeking to formulate a response to indigenous demands for data ownership. While the book is focused on the CANZUS states of Canada, Australia, Aotearoa/New Zealand and the United States, much of the content and discussion will be of interest and practical value to a broader global audience. ' A debate-shaping book ... it speaks to a fast-emerging field; it has a lot of important things to say; and the timing is right. ' — Stephen Cornell, Professor of Sociology and Faculty Chair of the Native Nations Institute, University of Arizona ' The effort ... in this book to theorise and conceptualise data sovereignty and its links to the realisation of the rights of indigenous peoples is pioneering and laudable. ' — Victoria Tauli-Corpus, UN Special Rapporteur on the Rights of Indigenous Peoples, Baguio City, Philippines

This book presents some highlights from the deliberations of the 2003 conference of the International Study Association on Teachers and Teaching (ISATT). Part 1 presents the five keynote addresses of the conference, while Parts 2 through 4 present selected papers related to each of three sub-themes: knowledge construction and learning to teach, perspectives on teachers ' personal and professional lives, and teachers ' workplace as context for learning. The chapters in this book provide an array of approaches to understanding the process of teacher learning within the current context of the changing workplace environment. They also provide an important international perspective on the complex issues revolving around the international educational reform movement. Basically, they show how teachers ' workplace (inside and outside schools) are more than ever subject to continuous change and that, subsequently, standards for teaching must be flexible to these changing conditions. This asks for a redefinition of teacher professionalism in which the role of context in teacher learning is emphasized as well as the improvement of the quality of teacher thinking and learning. Related to the ever-changing context of teaching, a dynamic approach to teaching and teacher learning is required, in which identity development is crucial. Researchers have an important role to play in revealing and explaining how teachers can build their professional identity, through self-awareness and reflection, in the ever-changing educational contexts throughout the world.
