The Chemist

"The Chemist is the love child created from the union of my romantic sensibilities and my obsession with Jason Bourne/Aaron Cross. I very much enjoyed spending time with a different kind of action hero, one whose primary weapon isn't a gun or a knife or bulging muscles, but rather her brain."

Chemist | Definition of Chemist by Merriam-Webster

A chemist searches for new knowledge about chemicals and uses it to improve the way we live. He or she may develop products such as synthetic fibers, drugs, and cosmetics. Chemists create processes, including oil refining and petrochemical processing, that reduce energy use and pollution.

In this gripping page-turner, an ex-agent on the run from her former employers must take one more case to clear her name and save her life. She used to work for the U.S. government, but very few people ever knew that. An expert in her field, she was one of the darkest secrets of an agency so clandestine it doesn't even have a name. And when they decided she was a liability, they came for her without warning. Now she rarely stays in the same place or uses the same name for long. They've killed the only other person she trusted, but something she knows still poses a threat. They want her dead, and soon. When her former handler offers her a way out,

she realizes it's her only chance to erase the giant target on her back. But it means taking one last job for her ex-employers. To her horror, the information she acquires only makes her situation more dangerous. Resolving to meet the threat head-on, she prepares for the toughest fight of her life but finds herself falling for a man who can only complicate her likelihood of survival. As she sees her choices being rapidly whittled down, she must apply her unique talents in ways she never dreamed of. In this tautly plotted novel, Meyer creates a fierce and fascinating new heroine with a very specialized skill set. And she shows once again why she's one of the world's bestselling authors.

"A book of 25 science experiments kids can do at home from chemistry professor and science entertainer, Kate the Chemist"--

"25 edible science experiments that teach kids that cooking is chemistry"--

"Topics are organized into three parts: algebra, calculus, differential equations, and expansions in series; vectors, determinants and matrices; and numerical analysis and statistics. The extensive use of examples illustrates every important concept and method in the text, and are used to demonstrate applications of the mathematics in chemistry and several basic concepts in physics. The exercises at the end of each chapter, are an essential element of the development of the subject, and have been designed to give students a working understanding of the material in the text."--BOOK JACKET.

"Fifth grader Kate the Chemist is chosen to be the assistant director of the school play Dragons vs. Unicorns and has to use her science knowledge to find out who is trying to sabotage the show"--

My name's Allan Woodman. My friends (and enemies) call me Woody. I served three years in prison, bargained down from a life sentence for manufacturing illegal drugs because I had agreed to testify against some major criminals. I'm a college graduate with a degree in chemistry, which is what led me down the criminal path. And, oh yeah, I've got a 175 IQ. The logical question would be how the hell did a bright guy like me wind up a criminal? I made the most potent PCP and crystal meth ever sold on the streets. I was the best at what I did. And this is my story.

From atoms and fluorescent pigments to sulfa drug synthesis and buckyballs, this lush and authoritative chronology presents 250 milestones in the world of chemistry. As the "central science" that bridges biology and physics, chemistry plays an important role in countless medical and technological advances. Covering entertaining stories and unexpected applications, chemist and journalist Derek B. Lowe traces the most important and surprising chemical discoveries.

The third installment of the Kate the Chemist series that shows kids that everyone can be a scientist! Kate's school is having their first-ever STEM Night and the prizes are incredible! Kate is determined to win and comes up with the perfect experiment. But as she and her best friend, Birdie, start preparing, they find that Kate's project keeps getting messed up. Will Kate be able to use her science know-how to find out who is behind the STEM night sabotage? And will she

fix her project before it's too late? Praise for Kate the Chemist: Dragons vs. Unicorns: "Proves that science and fun go together like molecules in a polymer."--School Library Journal "It's a great introduction to the basics of Chemistry that is readily accessible to a variety of ages The way the everyday chemistry is blended in is done seamlessly, and has [me and my ten-year-old son] noticing how we are all doing a little bit of science everyday." --GeekMom.com
