An all new collection of photos of the famous German Tiger I shown on a variety of fronts.

This new volume covers development from the VK 45.02(P), VK 45.03(H) to the modifications under design for the Tiger II at the end of the war. All of this illustrated with scale drawings by Hilary L. Doyle combined with drawings, sketches, and photographs depicting external modifications is well as internal views. Over twenty years of intensive research went into finding the original documents needed to create this new history on the development, characteristics, and tactical capabilities of the Tiger series. Tom Jentz has conducted an exhaustive search for surviving records of the design/assembly firms (including Henschel, Krupp, Nibelungenwerk, Porsche, and Wegmann), the Heeres-Waffenamt, the D656 series of manuals on the Tiger, and the war diaries and operations reports from the German units. The written records were supplemented by examining thousands of photos. On-sight research into almost all the surviving Tigers provided details that could only be obtained from actual specimens. New information was found on the evolution of the heavy tank series, the key decisions on the design of the Tigers, the significant modifications made during the production runs, production statistics, the Tigers characteristics and tactical capabilities, an exact accounting of the issue of the Tigers to the combat units, and combat account written directly after the actions. Tom Jentz is also the author of Germany's Tiger Tanks: Tiger I & II - Combat Tactics; Germany's Panther Tank: The Quest for Combat Supremacy; Panzertruppen 1933-1942; and Panzertruppen 1943-1945 (all four titles are available from Schiffer Publishing Ltd.).

This new two volume study of Germany's heaviest Jagdpanzer (tank destroyer) is the result of nearly twenty years of exhaustive research. Volume one, Technical History, presents a well-structured and highly detailed technical analysis of this complex tank destroyer. Using manufacturer's documentation, drawings, and photographs combined with Intelligence analysis, this work details the origin, design, construction and assembly of the vehicle. The armor, armaments, engine, transmission, suspension systems, electrical and optical equipment, together with the operation and maintenance procedures are included to complete this definitive analysis.

Over 20 years of research went into the creation of this history of the development, characteristics, and capabilities of the Panther.

The Tiger tank is probably the most famous tank of World War II. Both the Tiger I and its successor, the Tiger II, were used as bases for other German vehicles. This book covers a wide range of vehicles based on the chassis of the Tiger I and II tanks in 1/72 scale. It provides a detailed guide to modelling the basic tank versions as well as the Sturm rsor Sturmtiger (Tiger I variant), Jagdtiger (Tiger II variant) and the Panzerj ger Tiger (P) Elefant tank destroyer. A variety of camouflage schemes are described in depth, and the text covers photo-etched parts, resin aftermarket sets, scratch-building, and the use of figures and groundwork.

In September of 1939, the world was astounded by Germany's ability to defeat Poland in less than a month. With the world still puzzled by the suddenness of this event, Denmark, Norway, Holland, Belgium, and France fell in rapid succession to the German onslaught, leaving Britain in shock. Greece and Yugoslavia were rapidly over-run during April of 1941, while German-Italian forces advanced rapidly in North Africa. Russia's turn was next, when German forces began pulverizing their forces in June of 1941. How had Germany achieved victory after victory, often against numerically superior enemy forces? The answer came in two words-Panzer and Blitzkrieg. When and how had Germany built its Panzer forces and trained them for the Blitzkrieg? When was each Panzer unit formed? What was their organization? Why were Panzer units disbursed among the Panzer-Divisions, leichte Divisions, and Armeekorps? When were the various types of Panzers developed? What were their armament, armor protection, capability? How many of each type were produced? What tactics did they use? How successful were they in combat? This is the only book that provides detailed answers to these and other questions related to how German tankers fought in World War II. Tom Jentz found the answers to these questions bu digging through original records for the past twenty-five years. The content os this book is derived solely from these original records consisting of war diaries, reports, and technical and tactical manuals written during the war. The story is told as recorded by those responsible for decisions in developing the Panzertruppen and by those who fought in the Panzers. As work on this book progressed it became apparent that the story of the Panzertruppen was divided into two distinctly separate phases; offensive and defensive. This first volume presents the offensive phase up to October 1942. A second volume is planned that will cover the defensive phase to the end of the war. Tom Jentz is also the author of Germany's Panther Tank: The Quest of Combat Supremacy(available from Schiffer Publishing Ltd.).

To collectors of modern military uniforms, Vietnam era tigerstripe combat fatigues have always been a much sought after commodity. The pattern itself, in all of its classic forms, is both exotic and unique and carries with it an immediate, esthetic sense of the full drama of that not to distant Southeast Asian conflict. There exists however, surrounding this one camouflage pattern numerous misconceptions. Tiger Patterns analyzes to the most minute degree, the finite variances which defined the many original, Vietnam era tigerstripe patterns and uniform cuts and establishes dependable identification techniques and practices, whether your particular interests area as a historian, veteran, modeler, or collector and enthusiast. AUTHOR:

Flying Tiger to Air Commando is an enlisted man's story of over twenty years of service to his country. From enlistment in the Army Air Corps at age nineteen as a Private to his retirement at age 44 as a Master Sgt., his unusual tale will interest all aviation, history, and gunnery buffs. At age twenty he volunteered for the American Volunteer Group, hardly aware of China and its problems with Japan, but was soon to find out as an armorer with Chennault's famed Flying Tigers. When that elite group was broken up, he returned to the States, soon to return to the CBI theater flying as a B-25 gunner with his good friend from the Tigers, R.T. Smith, in the First Air Commandos. The end of WWII was not the end of combat for Sgt. Baisden, who saw service in the Korean War, both as an armorer in the 80th Fighter-Bomber Squadron of the 8th Fighter-Bomber Group, and as a gunner on B-29s in the 93rd Heavy Bombardment Squadron, 19th Bomb Group. His last days in the Air Force were flown as an in-flight refueling technician in KC-97s with the 308th, 2nd, and 19th Air Refueling Squadrons. His down-to-earth narrative is interesting and informative, and is presented along with his own period

Covers the development and use of the Tiger family of armored fighting vehicles.
