Many people have become very rich in the commodity markets. It is one of a few investment areas where an individual with limited capital can make extraordinary profits in a relatively short period of time. Commodities are agreements to buy and sell virtually anything that is harvested except onions. (A 1958 federal law prohibits trading onions.) Such goods are raw or partly refined materials whose value mainly reflects the costs of finding or gathering them. They are traded for processing or incorporation into final goods. Examples are crude oil, cotton, rubber, grains, and metals and other minerals. Since it is impractical to transport these bulky, often perishable materials, what is actually traded are commodities futures contracts, or options, that are agreements to buy or sell at an agreed upon price on a specific date. Trading in futures and options is speculative in nature and there is a substantial risk of loss. These investments are not suitable for everyone, and only risk capital should be used. As with many other business segments, the Internet and technology have opened up this attractive marketplace to a new breed of individual investors and speculators working part-time. You and I can now stand on an even playing field with the largest banks, wealthiest individuals, and trading institutions from the comfort of home. Commodity trading can provide you with very high, secure rate of return, in some cases as high as 12%, 18%, 24%, or even 300% or more per year. If performed correctly, commodity trading will

Short-term trading refers to the practice of buying and selling financial instruments within the same trading week or, at most, a few weeks. Short-term traders buy and sell stocks over a few days or weeks in the hope that their stocks will continue climbing in value for the time they own them, making for quick and, often, huge profits. Some of the more commonly traded financial instruments are stocks, stock options, currencies, and futures contracts such as equity index futures, interest rate futures, and commodity futures. Short-term trading was once the preserve of banks, financial firms, and professional investors. Many traders are bank or investment firms employees working in equity investment and fund management.
