Second keep it covered and clean. If you do not the nail can grow back deformed or not at all. Soak in peroxide every 24-48 hours. Cover area with Neosporin ointment. (make it guey.) Cover with soft gauze wand wrap loosely and then use tape to secure but not on nail area.Cover that in a gauze tube.

How Can I Fix My Deformed Fingernail - Prijom

Pincer nail deformity is a transverse over-curvature of the nail plate. It is most often caused by onychomycosis, psoriasis, tumors of the nail apparatus, and poorly fitting shoes. It has also been reported in patients with systemic lupus erythematosus, Kawasaki disease, end-stage renal disease, and some genetic syndromes (eg, paronychia congenita). Patients often have pain at the borders of the nail where the nail plate curves into the tips of the fingers.

A nail disease or onychosis is a disease or deformity of the nail. Although the nail is a structure produced by the skin and is a skin appendage, nail diseases have a distinct classification as they have their own signs and symptoms which may relate to other medical conditions. Some nail conditions that show signs of infection or inflammation may require medical assistance.
