general principles for determining the tensile properties of plastics and plastic composites under defined conditions. Several different types of test specimen are defined to suit different types of material which are detailed in subsequent parts of ISO 527. The methods are used to investigate the tensile behaviour of the test specimens

ISO 527-1:2019(en), Plastics ? Determination of tensile ...

This part of ISO 527 specifies the test conditions for determining the tensile properties of moulding and extrusion plastics, based upon the general principles given in ISO 527.1. The methods are selectively suitable for use with the following range of materials:

ISO 527-2 is intended for testing rigid and semi-rigid plastics, whether molded, extruded, machined, or cast. ISO 527-2 also applies to reinforced plastics (with the exception of fiber-reinforced plastics, which are covered under ISO 527-4 and ISO 527-5). When testing films and sheets less than 1 mm in thickness, ISO
