(PDF) Manual of Forecasting: Methods and Applications

Forecasting is the process of making predictions of the future based on past and present data and most commonly by analysis of trends. A commonplace example might be estimation of some variable of interest at some specified future date. Prediction is a similar, but more general term. Both might refer to formal statistical methods employing time series, cross-sectional or longitudinal data, or alternatively to less formal judgmental methods. Usage can differ between areas of application: for exam

Forecasting - Wikipedia

The module uses Makridakis, S., Wheelwright, S.C. and Hyndman, R.J. 1998. Forecasting: Methods and Applications 3rd Ed., New York: Wiley as text book. Most of the material of these notes is extracted from there. Also, most of the data sets used in the demonstrations is drawn from this book.
