Because the fractal compression method has not been entirely satisfactory for some types of images such as maps, fingerprints and satellite images we have implemented a version of the wavelet compression method reported by Antonini. This encoding method has three main steps: a wavelet transform followed by a lattice vector

Finally, fractal encoding is applied to the low frequency coefficients of WPT, and a modified wavelet-based coding is used for coding the remaining high frequency coefficients. This new method provides improved compression results as compared to the wavelet and fractal compression methods.
