Although  $g$  varies from  $9.78 \text{ m/s}^2$  to  $9.83 \text{ m/s}^2$ , depending on latitude, altitude, underlying geological formations, and local topography, let's use an average value of  $9.8 \text{ m/s}^2$  rounded to two significant figures in this text unless specified otherwise. Neglecting these effects on the value of  $g$  as a result of position on Earth's surface, as well as effects resulting from Earth's ...

Step 2: The only number left on the same side as the variable is the . coefficient, 2. It is our second target. If we divide both sides by two, we create the following equation: (Note: between the 2 and the  $\square\square\square$  is an invisible multiplication sign):  $2\square\square\square 2 = 8 2$  (The opposite of  $2\square\square\square$  is  $\div 2$ )  $\therefore \square\square\square = 4$ . Check.

2. Quadrilaterals with a pair of parallel sides. If a quadrilateral has a pair of parallel sides, both of them are called a base. In a similar way to triangles, the altitude of such a figure is the perpendicular distance from a base to the opposite side. Since they are parallel, either one will do.
