Abstract Chapter written for the Handbook of Volatility Models and their Applications, edited by Luc Bauwens, Christian Hafner, and Sébastien Laurent, forthcoming in 2012 (John Wiley & sons). This chapter presents an introductory review of volatility models and some applications.

Volatility Models

Abstract. The main purpose of this master thesis is to evaluate and compare different volatility models. The evaluation is based on how well the models are imitating the implied volatility of different stock options. Three different times to maturity will be studied. The volatility models are evaluated based on daily deviations from the implied volatility and on daily changes of the modelled volatility.

A comparison between different volatility models

Grounded in the Granger causality test, vector autoregression (VAR) model, and BEKK-GARCH model, our current study aims to examine the effect of mean and volatility spillover between the United States (US) economic policy uncertainty (EPU) and West Texas Intermediate (WTI) crude oil price. Using the US EPU monthly index and WTI spot price data from 1996 to 2019, we revealed that there is a one ...
