Regents Physics - Defining Motion Distance and Displacement. An object's position refers to its location at any given point in time. If we confine our study to motion in one dimension, we can define how far an object travels from its initial position as its distance, "d." Distance, as defined by physics, is a scalar. It has a magnitude, or size, only.

PHYSICAL SETTING PHYSICS

This law tells us that the force of gravity between two objects is proportional to each of the masses (m_1 and m_2) and inversely proportional to the square of the distance between them (r). The universal gravitational constant, G , is a "fudge factor," so to speak, included in the equation so that your answers come out in S.I. units. G is given on the front page of your Regents Physics
