Abstract. This paper reviews the development of large sample theories for spatial econometric models. These theories form important parts on statistical foundations for spatial econometrics. Another important component is the theoretical economics foundation for spatial econometric model specifications.

Description. Spatial Econometrics provides a modern, powerful and flexible skillset to early career researchers interested in entering this rapidly expanding discipline. It articulates the principles and current practice of modern spatial econometrics and spatial statistics, combining rigorous depth of presentation with unusual depth of coverage. Introducing and formalizing the principles of, and 'need' for, models which define spatial interactions, the book provides a comprehensive ...

Spatial econometrics is a subfield of econometrics that deals with spatial interac- tion (spatial autocorrelation) and spatial structure (spatial heterogeneity) in regres- sion models for cross-sectional and panel data (Paelinck and Klaassen, 1979;

CHAPTER FOURTEEN Spatial Econometrics

The Journal of Spatial Econometrics publishes high-quality articles addressing all aspects of spatial and network econometrics, interpreted in a broad sense. The contents include both models and theoretical instruments from spatial statistics and spatial data analysis that describe various economic effects - externalities, interactions, spatial concentration and many others - as they manifest themselves in different areas including economics, geography and regional science.

Spatial econometrics is a refinement of this, where either the theoretical model involves interactions between different entities, or the data observations are not truly independent. Thus, models incorporating spatial auto-correlation or neighborhood effects can be estimated using spatial econometric methods.
