Combining transformations There have already been rules (from Core 1) for the transformation of a given function from another, subject to the differences between the two functions. It is often the case that when transformations are carried out in succession there will need to be consideration of the order of the transformations.

The homework assignment was to complete the last four problems on Name that Transformation. These problems are interesting and typically lead to lots of great discussion (MP 3). In Number 7 one transformation is a reflection over the line  $x=1$ . The students have practiced finding equations of vertical and horizontal lines in previous sections, so I expect most of them will see this.
