...

Naloxone infusion resulted in a highly significant reduction in the frequency of flushes and in the number of LH pulses. We conclude that flushing and its neuro-endocrine correlates are related to activation of opiate receptors. Naloxone may provide the basis for a non-steroidal treatment of climacteric flushing attacks.

CLIMACTERIC FLUSHING: CLINICAL AND ENDOCRINE RESPONSE TO ...

Our study indicates that when climacteric women have atypical complaints it is vital for diagnoses and therapy to assess the severity of vasomotor complaints by means of the following: slight flushes, zero to two flushes in daytime; moderate flushes, three to four flushes in daytime; and severe flushes five or more flushes in daytime.
